APPENDIX

WELCOME TO REMNANT

Welcome to **Remnant: A RWBY Tabletop Roleplaying Game**. This book is the complete rulebook for the game — everything a player needs to take on the role of a Huntsman or Huntress, and everything a Game Master needs to run the world of Remnant at the table.

In Remnant, you play a licensed protector of humanity — trained at one of four academies across a broken world. You hunt the creatures of Grimm, navigate the politics of four very different kingdoms, master the elemental art of Dust, and learn to wield the unique manifestation of your own soul: your Semblance. You grow from a fresh-faced **Initiate** into a **Legendary Huntsman** over the course of a campaign — and the world grows with you.

Tone — Optimistic Tragedy

Remnant is a game of *optimistic tragedy*. The world is broken and dangerous. Characters believe in people, in each other, and in the possibility of something better — and the game earns that hope by putting it through genuine darkness. Combat is fast, cinematic, and decisive. Drama is built around teamwork, identity, and the soul. Players will lose things they love. They will also save things no one else could.

How to Use This Book

This book contains both player and GM content in one volume.

- **Players** should read Chapters 1 through 11. Those chapters cover the world, the rules, character creation, your character's growth, and everything you need to bring a Huntsman to the table.
- **Game Masters** should read the entire book. The Grimm bestiary in Chapter 12 and the GM Guidance in Chapter 13 are written for you — they are marked with a **GM Chapter** badge so they are easy to find.
- **Appendices** at the back are reference tables — conditions, Dust, Semblance costs, Grimm summary, and a glossary — so you can look things up mid-session without flipping through the rules.

A Note on RWBY

Remnant: A RWBY Tabletop Roleplaying Game is an unofficial fan creation. RWBY(TM) and all related characters, names, kingdoms, academies, and elements are the property of Rooster Teeth Productions. This work is not affiliated with, endorsed by, or connected to Rooster Teeth in any way. It was made for the love of the world they built — for personal, non-commercial use at our own kitchen tables. We hope it honors the source.

CHAPTER 1

THE WORLD OF REMNANT

Remnant is the world this game is set in: a fractured planet built atop the ruins of older civilizations, lit by a shattered moon, and stalked by creatures born of darkness. Four great kingdoms still stand. Between them lies wilderness, ruins, and the Grimm. The Huntsmen and Huntresses are the thin line that keeps it all from falling.

The Grimm and the Darkness

The **creatures of Grimm** are not animals. They have no Aura, no soul, and no purpose other than the destruction of humanity. They are drawn to negative emotion — fear, anger, grief, despair — like sharks to blood. The longer a fight drags on and the more emotion the world generates, the more Grimm arrive. Holding the line is not a matter of strength alone. It is a matter of who you are while you fight.

The Four Kingdoms

Each kingdom has its own feel, its own people, and its own academy.

Vale

Vale is warm, lived-in, and community-focused. Ordinary people show extraordinary courage here. Neighborhoods are tight, civilians are proud of their Huntsmen, and trust runs deep even after disaster. Vale is the easiest of the kingdoms to call home — and that very ordinariness is what makes it heartbreaking when the world reaches in and breaks it.

Atlas

Atlas is cold, hierarchical, and technologically advanced. Its floating cities, its military precision, and its beauty are all real — and all built on inequality. Class tension runs through every conversation. The same nation that produces the most disciplined Huntsmen in the world also produces the bitterest exiles.

Mistral

Mistral is ancient, layered, and morally complex. Old money sits next to deep poverty. Tradition masks corruption, and corruption shelters under the politeness of tradition. Mistral has produced more legends than any other kingdom — and more cautionary tales.

Vacuo

Vacuo is harsh, free, and brutally honest. Survival is the only measure of worth that matters out in the desert. There is no pretense in Vacuo and no patience for it. The solidarity among those who endure is genuine, and the contempt for those who never had to is just as genuine.

The Four Academies

Each kingdom maintains a Huntsman academy. The academies train the next generation of licensed protectors — combat, tactics, Dust handling, and the discipline required to wield Aura responsibly. Each academy reflects its kingdom.

Beacon Academy — Vale

Beacon stands above Vale on a tower of pale stone. It is the most structured of the four academies — elegant, academic, and unashamedly idealistic. Students here learn to be the protectors their kingdom believes in. Beacon students carry the warmth of their kingdom with them into the field.

Shade Academy — Vacuo

Shade is sun-bleached, sparse, and earned. There are fewer rules here than at any other academy and fewer reassurances. The instructors do not teach you to be a Huntsman. They give you the desert, and the survivors graduate.

Haven Academy — Mistral

Haven is ornate, ancient, and layered with centuries of tradition. Its halls are full of weapons whose names mean something. The training is as much philosophical as it is martial — and the deepest lessons at Haven are about what kind of Huntsman you will choose to be.

Atlas Academy — Atlas

Atlas Academy is clinical, precise, and technological. Its graduates are the most disciplined fighters in Remnant and the most likely to question what they were trained for. Standards are exacting, weapons are advanced, and the line between Huntsman and soldier is thinner than anyone there would admit.

Huntsmen and Huntresses

A Huntsman is a licensed protector of humanity. The license is real — issued by an academy upon graduation, recognized across kingdom borders, and revocable. With the license comes legal authority, social trust, and the implicit promise that you will go where the line is failing and hold it.

Huntsmen matter because the world cannot defend itself. Conventional militaries can hold a city. Only Huntsmen can clear a Goliath's hunting ground, take down an Alpha Grimm, or step into a story before it becomes a tragedy. The job is dangerous, often thankless, and almost always personal.

The Faunus

The **Faunus** are people. They carry one inherited animal trait — ears, a tail, claws, scales, sometimes more — and they are otherwise as human as anyone else. Faunus discrimination is real in Remnant, and different kingdoms handle it very differently. It is not a flavor element. It is a fact of the world and a serious topic to handle with care. The GM should discuss with the table at Session Zero how present this element will be in their campaign.

Salem

Even if players never encounter her directly, **Salem** is always there. Her influence should be felt in the world — the Grimm that seem more organized than they should be, the council member whose decisions don't quite add up, the disaster that arrives with strange timing. The world has a hidden architecture. The

GM is the one who knows.

The Three Pillars of a Huntsman's Power

Every Huntsman fights with three things: a weapon, the Aura of their soul, and the Dust of their world. The full mechanics of these systems come later. Here, in the lore primer, the basics:

- **Aura** is the manifestation of a person's soul as a protective force. It surrounds the body as a shield, absorbing damage that would otherwise be lethal. It is also the wellspring from which a Huntsman's Semblance is drawn — a unique, personal ability shaped by who that Huntsman is.
- **Semblance** is the soul's expression — one ability, one truth made manifest. No two Semblances are the same. Some are blindingly fast. Some heal. Some shake the earth. The Semblance reflects the person.
- **Dust** is the elemental engine of Remnant — refined nature in crystal form. Fire, water, lightning, wind, and the seven derived types that emerge when those primaries combine. A Huntsman who masters Dust carries the elements in their pockets.

CHAPTER 2

CORE MECHANICS

Remnant runs on a single resolution mechanic. Once you have it, every other system in this book hangs off the same scaffolding.

The Attribute Check

The fundamental action in Remnant is the attribute check:

Roll 2d10 + your attribute die. Meet or beat the DC.

Example. Ruby tries to vault over a collapsing bridge under fire. The GM calls for a Finesse check, DC 14. Ruby's player rolls 2d10 — a 7 and a 4 — plus her Finesse d8, which rolls a 6. Total: 17. Success.

The 2d10 produces a bell curve. The most common result before the attribute die is 11, which means a Moderate task feels genuinely achievable for trained Huntsmen, and a Legendary task feels like an actual story moment.

Difficulty Classes

DC	Difficulty
8	Simple
11	Moderate
14	Challenging
17	Hard
20	Extreme
23+	Legendary

Degrees of Success

Three outcomes apply to every roll:

- **Full Success** — meet or beat the DC. You do it, clean.
- **Partial Success** — within 3 below the DC. You do it, but with a cost or complication. The vault works, but you twist your ankle. The negotiation works, but the contact wants something later.
- **Failure** — 4 or more below the DC. It doesn't work, and something gets worse. The bridge gives way under you. The contact slams the door.

Edge and Setback

Rather than rolling twice, advantage and disadvantage affect the *attribute die* only — preserving the bell curve of 2d10.

- **Edge** — roll your attribute die twice, take the higher result.
- **Setback** — roll your attribute die twice, take the lower result.

Edge and Setback are granted by mechanics — Semblance effects, archetype abilities, called shots — and by fictional circumstance. A Huntsman fighting blind has Setback. A Huntsman attacking a Drenched target with Lightning has Edge.

Skills and Training

Skills represent focused expertise within an attribute. Anyone can attempt any skill check by rolling the governing attribute. A character who is **Trained** in the skill adds their **Training Bonus** to the roll.

Full skill check: 2d10 + attribute die + Training Bonus (if trained) vs DC.

Training Bonus scales with rank:

Rank	Training Bonus
Initiate	+1
Huntsman	+2
Specialist	+3
Legendary Huntsman	+4

Narratively, being Trained means the academies recognized this as your specialty. You did the drills. You did the late nights. You have earned the right to expect competence from yourself in this domain.

CHAPTER 3

ATTRIBUTES

Attributes are the six measures of what your Huntsman is made of. Each attribute is rated as a die size — from d4 (a weakness) through d12 (exceptional). When you make a check, you roll 2d10 plus the die for the relevant attribute.

Die Sizes

Die sizes go in order: d4 -> d6 -> d8 -> d10 -> d12. No attribute can exceed d12. Most characters begin with a mix — strong in one or two places, average in most, and weak in one.

The Six Attributes

Brawn

Brawn covers physical power. Striking, lifting, breaking, intimidating with sheer presence. Brawn is the Huntsman who hits the Ursa and feels it through their boots.

Finesse

Finesse covers precision, speed, and coordination. Most Huntsmen attack with Finesse. Acrobatics, stealth, and piloting all live here. Finesse is also the basis of Defense Rating — the faster you can move, the harder you are to hit.

Resolve

Resolve covers willpower and mental toughness — resisting fear, shrugging off manipulation, holding concentration on a Semblance while being hit. Resolve is the Huntsman who watched a teammate fall and kept swinging.

Wit

Wit covers perception, tactics, and quick thinking. Spotting the ambush. Reading the battlefield. Knowing what the enemy will do before they do it. Wit is also the basis for technical work — Dust crafting and investigation rely on it.

Aura

Aura covers soul energy. Aura determines the size of your Aura Pool, which is both your damage-absorbing shield and the resource you spend to use your Semblance. Semblance Specialists and Dust Mages live and die by their Aura die.

Grit

Grit covers survival instinct and pain tolerance. Grit determines your HP, your recovery rates, and your odds during the Final Flare. Grit is the Huntsman who, by rights, should already be dead — and isn't.

Starting Attribute Array

At character creation, distribute the following dice across the six attributes however you choose:

One d8, four d6s, and one d4.

Place your d8 in your strongest attribute. Place your d4 in your weakness — most characters have one — and accept the d6s elsewhere. Attributes upgrade through advancement; you will have time to grow.

Upgrading Attributes

Every rank up, you upgrade one attribute one die size — d4 -> d6, d6 -> d8, and so on. The cap is d12. No attribute may exceed it.

CHAPTER 4

SKILLS

Skills are specialties tied to attributes. Each skill has a governing attribute — the one used by default for that kind of check. The GM may call for a different attribute if the fiction demands it. A Brawler trying to intimidate someone they care about may roll Intimidation with Resolve instead of Brawn.

The Twenty Skills

Attribute	Skills
Brawn	Athletics, Brawling, Breaching, Intimidation
Finesse	Acrobatics, Stealth, Sleight of Hand, Piloting
Resolve	Composure, Deception, Persuasion, Survival
Wit	Perception, Investigation, Tactics, Technology
Aura	Semblance Control, Aura Sense, Dust Channeling
Grit	Endurance, Resistance, Recovery

Acquiring Trained Skills

Characters build their trained skill list at creation from three sources.

Free Pick

Every character starts with one Trained skill of their choice — something they were drawn to before academy. The kid who could already shoot. The teenager who already knew how to talk to people. Pick what fits.

Weapon-Style Archetype

Each archetype grants 2-3 Trained skills tied to that fighting style (see Chapter 7). A Bladesman is trained in Acrobatics and Athletics. A Marksman is trained in Perception and Stealth. And so on.

Academy

Each academy grants 1-2 Trained skills reflecting its curriculum.

Academy	Kingdom	Trained Skills Granted
Beacon Academy	Vale	Tactics, plus one of choice
Shade Academy	Vacuo	Survival, plus one of choice
Haven Academy	Mistral	Composure, plus one of choice

Academy	Kingdom	Trained Skills Granted
Atlas Academy	Atlas	Technology, plus one of choice

Starting characters typically have 4-6 trained skills. You will gain more through advancement.

What Does Trained Actually Mean?

Training is more than a +1 to a die roll. It is the entire weight of what an academy gives you. When you mark **Trained** in Perception, you are not just slightly better at spotting things — you went through the academy curriculum that taught you what to look for, the drills that built reflex, and the cohort of peers who tested it against you. Trained skills are who your character was shaped into. Untrained skills are still possible — you can still try — but trained skills are where the academies promise the world a competent Huntsman.

CHAPTER 5

AURA AND SEMBLANCE

Aura is the soul made manifest. Semblance is what the soul has to say. Together they are the most distinctive feature of a Huntsman — and the two systems that most define what it feels like to play this game.

Aura — The Soul as Armor and Engine

Aura is a single pool with two functions sharing one resource. While Aura is active, it surrounds the body and absorbs incoming damage completely. The same pool is spent to activate the Huntsman's Semblance. Both functions draw from the same reservoir, which creates the fundamental tension of Aura play: *do I let my shield deplete to use my Semblance, or do I hold it and fight without my best tool?*

Aura Pool Formula

Aura Pool = Base (from Aura die) + Rank Bonus.

Aura Die	Base Aura Pool
d4	30
d6	40
d8	50
d10	60
d12	70

Rank	Rank Bonus
Initiate	+5
Huntsman	+10
Specialist	+15
Legendary Huntsman	+20

Example. A Huntsman with Aura d8 has 50 + 10 = 60 Aura.

How the Shield Works

While Aura is active, it absorbs the full damage of every hit. No roll, no bleed-through to HP. The Aura Pool takes the hit completely. A Huntsman with Aura is, for all practical purposes, untouchable — until the pool runs out.

Aura Break

When the Aura Pool hits 0, three things happen at once:

- The shield stops functioning. All damage now goes straight to HP.
- The Huntsman's Semblance is locked until they recover Aura.
- The Huntsman gains the **Aura Broken** condition — visible to enemies. Some Grimm hunt Aura Broken targets specifically.

Aura Break is always a dramatic story moment. The flickering light dying. The sudden vulnerability in their eyes. Teammates noticing. GMs are asked to describe it every single time.

Spending Aura for Semblance

Activating a Semblance costs Aura points from the same pool as the shield. Cost is determined by the Semblance's power level and modified by Scope (below).

Semblance Power Level	Aura Cost
Minor effect	4
Moderate effect	8
Major effect	12
Extreme effect	16

(Modified by Scope — see the Aura Cost table later in this chapter.)

Aura Recovery

In Combat:

- The Sentinel's Intercept mechanic recovers 1 Aura point per intercept.
- Certain Semblance abilities can restore Aura.
- A full round of focus (no movement, no attacks) recovers Aura die result in Aura.

Out of Combat — Short Rest scales by rank:

Rank	Short Rest Aura Recovery
Initiate	1/3 of max Aura
Huntsman	1/2 of max Aura
Specialist	2/3 of max Aura
Legendary Huntsman	3/4 of max Aura

Long Rest always recovers full Aura regardless of rank.

Semblance — The Soul Made Manifest

A Semblance is a unique expression of a character's Aura — shaped by their personality, their fears, their desires, their identity. No two Semblances are the same. Semblance creation is collaborative: the player designs the ability with the Game Master during Session Zero.

The Three Components

Every Semblance is built from three components. Together these determine Aura Cost automatically.

1. **Type** — what category of effect it creates.
2. **Scope** — how broadly it applies.
3. **Intensity** — how powerful the effect is.

Semblance Type

Type	Description	Primary Attribute
Enhancement	Amplifies the user's own physical capabilities	Brawn or Finesse
Projection	Creates or launches an external force or construct	Aura
Manipulation	Alters the environment or another person	Resolve or Aura
Restoration	Heals, stabilizes, or strengthens allies	Aura
Perception	Expands senses or awareness beyond normal limits	Wit
Binding	Restrains, immobilizes, or controls movement	Aura or Resolve

Scope

Scope	Definition	Cost Modifier
Personal	Affects only the user	x1
Single Target	Affects one other creature or object	x1.5
Area	Affects multiple targets or a zone	x2

Intensity

Intensity	Definition	Base Aura Cost
Minor	Small effect, subtle impact	4
Moderate	Meaningful effect, changes flow of a scene	8
Major	Significant effect, can turn a fight	12
Extreme	Extraordinary effect, story-level impact	16

Aura Cost Table

The full grid of base Aura cost combining Intensity and Scope.

Intensity	Personal	Single Target	Area
Minor	4	6	8
Moderate	8	12	16
Major	12	18	24

Intensity	Personal	Single Target	Area
Extreme	16	24	32

Semblance Checks

Uncontested activation — no roll needed. The Semblance fires, the Aura is spent, the effect happens.

Contested activation — when targeting an unwilling creature, roll:

2d10 + Aura die + Training Bonus (if trained in Semblance Control) vs target's Resolve + 8 as DC.

Degrees of success apply. A failed contested Semblance still costs the Aura.

Duration

Duration	Definition	Additional Cost
Instantaneous	Resolves immediately	None
Short	Lasts until end of user's next turn	+2 Aura
Sustained	Lasts as long as user concentrates (Bonus Action each round)	+2 Aura per round
Scene	Lasts entire encounter	+8 Aura upfront

Sustained concentration. Taking damage while sustaining requires a Resolve check DC 11 to maintain. Failure ends the Semblance immediately.

Semblance Growth

At each rank advancement, choose one upgrade for your Semblance from the list below. The same upgrade can be taken twice if it applies twice.

Upgrade	Effect
Efficiency	Reduce Aura cost by 2 (minimum 2).
Reach	Increase Scope by one tier (Personal -> Single Target -> Area).
Power	Increase Intensity by one tier.
Precision	Gain Edge on contested Semblance activation rolls.
Endurance	Sustained duration costs reduce by 1 Aura per round.
Resilience	Concentration check DC reduces to 8.
Awakening	Player designs a custom upgrade reflecting their Semblance's growth — requires GM approval.

Undiscovered Semblance

Players can choose to leave their Semblance undiscovered at character creation. Aura is unlocked, but the ability hasn't manifested yet.

- The player and GM design the Semblance privately during Session Zero.
- The GM knows what it is. The player may have hints.

- A dramatic trigger condition is agreed upon — an emotionally charged story moment.
- When the trigger occurs, the Semblance activates unbidden, at full effect, with no Aura cost for the first activation.

Mechanical benefit: Characters starting Undiscovered begin with +10 to their Aura Pool. This bonus disappears once the Semblance is discovered.

Soul Surge

The Semblance Specialist archetype's signature mechanic — once per encounter, upgrade Intensity one tier and Scope one tier for a single activation. Cost doubles based on the upgraded values. Cannot be used if the Specialist's Aura shield is broken. See Chapter 7 for the full Semblance Specialist archetype entry.

Semblance Creation Is Collaborative

A Semblance is not picked from a menu. It is built between the player and the GM during Session Zero. The GM should approve it against three criteria:

- **It reflects the character's identity.** Push the player to connect the ability to who their character is, not just what they want to do mechanically.
- **It has a clear limitation.** Every Semblance has a weakness beyond Aura cost. The limitation is part of the design.
- **It doesn't replace the game.** A Semblance adds to encounters. It does not bypass them.

Example Semblances

"Ironclad" - Enhancement / Personal / Moderate (8 Aura)

User's skin hardens briefly, reducing the next hit's Aura damage by half. **Limitation:** Only triggers reactively, and must be declared before the damage roll.

"Phantom Step" - Projection / Personal / Minor (4 Aura)

User leaves a brief afterimage at their previous position, causing the next attack against them to target the image. **Limitation:** Once per round, and doesn't fool targets that can sense Aura directly.

"Leaden Voice" - Manipulation / Single Target / Moderate (12 Aura)

User's words carry unnatural weight — target makes Resolve check DC 14 or cannot take aggressive actions for one turn. **Limitation:** Requires direct speech, doesn't work on Grimm.

"Rally" - Restoration / Area / Major (24 Aura)

User channels Aura outward, restoring 10 Aura to all allies within Mid range. **Limitation:** Cannot restore beyond half pool per target. User cannot move the turn it's activated.

CHAPTER 6

HP AND STAYING IN THE FIGHT

HP is separate from Aura. While Aura is active, HP almost never matters. It only becomes relevant when Aura is broken — and when that happens, everything changes. HP represents actual physical damage. Running out is not the end of the encounter, but it is a story moment.

HP Formula

HP = Base (from Grit die) + Rank Bonus.

Grit Die	Base HP
d4	8
d6	12
d8	16
d10	20
d12	24

Rank	HP Rank Bonus
Initiate	+2
Huntsman	+4
Specialist	+6
Legendary Huntsman	+8

Full HP Table

By Grit die and rank:

Grit Die	Initiate	Huntsman	Specialist	Legendary
d4	10	12	14	16
d6	14	16	18	20
d8	18	20	22	24
d10	22	24	26	28
d12	26	28	30	32

HP Recovery

- **Short Rest** — roll your Grit die, recover that much HP.
- **Long Rest** — recover half of your max HP.
- **Medical Treatment** — recover full HP. Requires time, supplies, or a trained character.

The Final Flare

When a character reaches 0 HP, they do not fall unconscious immediately. On their **next turn** in the initiative order, they enter the Final Flare — one last burst of soul, identity, and refusal to fall.

During Final Flare

- The character rises with a full Action, Bonus Action, Movement, and Reaction available to them this turn.
- They cannot be downed by damage during this turn.
- This is a story moment. The GM is asked to spotlight the player and describe the scene.

After the Final Flare Turn — Grit Check DC 14

Result	Outcome
Full Success	Character drops to 1 HP — battered but standing, back in the fight.
Partial Success	Character is Downed — unconscious and stable.
Failure	Character is Critically Downed — unconscious and actively dying.

Downed

Unconscious. An ally can spend their Action to stabilize and wake them with 1 HP. They act next turn but carry Setback on all rolls for the rest of the encounter.

Critically Downed

Dying. Each round untreated, the Critically Downed character makes a Grit check DC 11. **Three failures before three successes equals death.** An ally must spend a full Action *and* Bonus Action to stabilize them. The character wakes after combat with 1 HP and Setback on all rolls until a Long Rest.

The Final Flare Is a Story Moment

When a character hits their Final Flare, pause. Stop the table. Give that player the spotlight completely. Let everyone feel the weight of what is happening. This is their moment — protect it. Do not roll anyone else's turn through it. Do not narrate over them. Make the Final Flare matter at the table the way it matters in the fiction.

CHAPTER 7

WEAPON-STYLE ARCHETYPES

Archetypes define a character's combat identity — their primary attributes, the skills the academy trained them in, and the signature mechanic that sets their fighting style apart. There is no class system in Remnant. There is your weapon, and how you fight with it.

All archetypes have access to weapon transformation. Every weapon has a minimum of two forms, defined at character creation, with meaningfully different tactical uses. Switching forms costs a Bonus Action.

Bladesman

Masters of melee combat. Swords, scythes, spears, axes. Up close is where they live.

Primary	Secondary	Trained Skills
Finesse	Brawn	Acrobatics, Athletics, plus one of choice

Signature Mechanic — Weapon Art. Once per round, after landing a melee hit, the Bladesman can perform a **Weapon Art** — a stylized follow-up technique that adds an additional effect: disarm, knockback, repositioning, or bonus damage. The list of Weapon Art options expands as the Bladesman advances in rank.

Marksman

Ranged specialists. Rifles, launchers, crossbows. They control the battlefield from a distance.

Primary	Secondary	Trained Skills
Finesse	Wit	Perception, Stealth, plus one of choice

Signature Mechanic — Tactical Sight. The Marksman can spend their Bonus Action to **Acquire a Target** — locking onto an enemy and gaining Edge on all ranged attacks against that target until the target moves range bands or the Marksman takes damage. Breaking line of sight removes the lock.

Brawler

Raw power fighters. Gauntlets, hammers, war fans, their own fists. They hit hard and take hits harder.

Primary	Secondary	Trained Skills
Brawn	Grit	Athletics, Brawling, plus one of choice

Signature Mechanic — Iron Will. When a Brawler takes damage that would reduce their HP — after Aura absorbs — they can make a Grit check (DC equals damage taken). On success, they reduce the damage by their Grit die result. Once per short rest.

Dust Mage

Dust-primary combatants. Their weapon is a conduit for elemental power.

Primary	Secondary	Trained Skills
Aura	Wit	Dust Channeling, Aura Sense, plus one of choice

Signature Mechanic — Dust Infusion. Dust Mages can infuse their weapon or attacks with Dust as a **Bonus Action**, adding elemental effects to their strikes without consuming a full Action — something no other archetype can do. They can also combine two Dust types simultaneously in real time, in a single activation. **Additional benefit:** Dust Mages carry +2 vials at every rank, and gain Edge on all Dust crafting checks.

Sentinel

Defensive anchors. Shields, area denial, protecting the team.

Primary	Secondary	Trained Skills
Grit	Resolve	Endurance, Resistance, plus one of choice

Signature Mechanic — Guardian's Stand. Once per round, when an ally within Close range is hit, the Sentinel can **Intercept** — stepping in to take the hit themselves. When Intercepting, they reduce all damage taken by their Grit die result. They also generate 1 Aura point back for every hit they Intercept, representing their Aura hardening under pressure. **How it works at the table.** When an ally is hit, the Sentinel declares Intercept as a Reaction. The damage transfers to the Sentinel. They roll their Grit die and subtract that from the incoming damage. They recover 1 Aura point. This can only happen once per round and only within Close range.

Tactician

Battlefield commanders. Buffers, debuffers, coordinators.

Primary	Secondary	Trained Skills
Wit	Resolve	Tactics, Composure, plus one of choice

Signature Mechanic — Command the Field. The Tactician can use their Bonus Action to issue a **Field Order** — a tactical directive that grants a specific benefit to one ally until the start of the Tactician's next turn. The Tactician learns additional Field Orders as they advance in rank.

Field Order	Effect
Cover Fire	Ally gains Edge on their next attack.
Brace	Ally reduces next damage taken by Tactician's Wit die.
Expose	Ally's next hit ignores target's armor rating.

Semblance Specialist

Fighters who weaponize their soul. Their Semblance isn't a supplement — it's the whole strategy.

Primary	Secondary	Trained Skills
Aura	Resolve	Semblance Control, Aura Sense, plus one of choice

Signature Mechanic — Soul Surge. Once per encounter, the Semblance Specialist can activate a **Soul Surge** — upgrading their Semblance's Intensity one tier and Scope one tier for one activation. This costs double the normal Aura cost based on the upgraded values, and cannot be used if their Aura shield is broken. As they advance in rank, Soul Surge becomes more refined and less costly.

CHAPTER 8

COMBAT

Combat in Remnant is structured but cinematic. Turns are clear. Distance is handled in **range bands**, not measured grids. Damage is decisive. The intent is to capture the speed and kinetic feel of a RWBY fight at the table — fast, dramatic, and over before anyone gets bored.

Initiative

Roll 2d10 + Finesse die at the start of combat.

Highest result acts first, then descending order. Initiative is set once and holds for the entire encounter. Ties are broken by Finesse die size (higher die wins). If still tied, those characters act simultaneously.

Action Economy

Action Type	What It Covers
Action	Attack, activate Semblance, use Dust, full skill check, help an ally.
Bonus Action	Weapon transformation, quick Semblance trigger, archetype mechanics, short movement.
Reaction	Intercept (Sentinel), counter attacks, certain Semblance abilities.
Movement	Change range bands once per turn freely.

Range Bands

Band	Distance	Typical Weapons
Close	Arm's reach / grappling distance	Melee, shotguns, war fans
Mid	Across a room / short street	Most firearms, thrown Dust, spears
Long	Across a field / rooftop to rooftop	Rifles, sniper configurations
Extreme	Maximum engagement distance	Sniper rifles only

Movement rules:

- Move one range band per turn freely.
- Moving two bands costs your Bonus Action as well.
- You cannot move three bands in a single turn — that requires a Semblance.
- Attacking outside your weapon's optimal range applies **Setback** on the attack roll.

Attack Rolls

2d10 + Finesse die (melee/ranged) or Brawn die (heavy/brawling) + Training Bonus (if trained) vs Defense Rating.

Defense Rating

Defense Rating = 8 + Finesse die size number + Armor bonus.

Die size number: d4 = 4, d6 = 6, d8 = 8, d10 = 10, d12 = 12.

Example. Finesse d8 + Light armor (+2) = Defense Rating 18.

Armor Type	Defense Bonus
No armor	+0
Light armor	+2
Medium armor	+4
Heavy armor	+6

Damage

On a hit, roll the weapon's damage die. Subtract from target's Aura Pool — or HP if Aura is broken.

Weapon Class	Damage Die
Light (daggers, small blades)	d6
Standard (swords, rifles, gauntlets)	d8
Heavy (war hammers, war fans, launchers)	d10
Signature (unique weapons, fully mastered)	d12

Critical Hits

If the attack roll exceeds the target's Defense Rating by 8 or more: roll the damage die twice, take the higher result, then add Brawn or Finesse die on top.

Weapon Transformation

Every archetype has access. Switching forms costs a Bonus Action. Each weapon has at least two forms defined at character creation with meaningfully different tactical uses. Example: *Crescent Rose* — scythe form (Close, d10) / sniper form (Extreme, d10). *Ember Celica* — shotgun gauntlets (Close, d8) / artillery form (Mid, d8).

Called Shots

Declared before the attack roll. The attacker announces target and intent, then rolls with Setback applied. On a hit, the called shot produces a specific effect by location.

Location	Effect on Hit
Head	Target makes Resolve check DC 14 or is Disoriented — Setback on all rolls until end of next turn.
Weapon Hand	Target makes Finesse check DC 14 or is Disarmed — weapon dropped, costs Action to recover.
Legs	Target makes Grit check DC 14 or is Slowed — cannot move range bands until end of next turn.
Weapon	Weapon Jam — target's weapon cannot transform for their next turn, locked in current form.
Aura Core	Drains extra Aura — deals double damage to Aura Pool, but no HP bleedthrough even if Aura breaks.

Aura Shield Interaction with Called Shots

Aura Status	Called Shot Result
Aura Active (full)	Damage absorbed, called shot effect negated entirely.
Aura Active (below half)	Damage absorbed, called shot effect downgraded — target rolls resistance check at Setback instead of normal.
Aura Broken	Full damage to HP, called shot effect applies in full with no resistance check.

Conditions

Every condition currently in the game:

Condition	Effect
Aura Broken	Shield gone, Semblance locked, HP exposed, visible to enemies.
Burning	Take damage die at start of next 2 turns (Fire Dust effect).
Frozen	Lose Movement next turn.
Shocked	Setback on next attack roll.
Drenched	Setback on Fire resistance; Lightning chains through Drenched targets.
Disoriented	Setback on all rolls until end of next turn.
Disarmed	Weapon dropped, costs Action to recover.
Slowed	Cannot move range bands until end of next turn.
Staggered	Cannot use Bonus Action next turn.
Grappled	Lose Movement until Brawn check DC 14 to break free.
Poisoned	Setback on Brawn and Finesse checks for 3 rounds.
Terrified	Must move away from source on first turn, Setback on all rolls for 2 rounds.

Condition	Effect
Despairing	Cannot take aggressive actions, can only move toward nearest exit.
Prone	Lose Movement next turn to stand; melee attackers gain Edge against prone targets.
Weapon Jam	Weapon locked in current form for next turn, cannot transform.

Grimm vs Human Enemies

Grimm have **no Aura**. They have straight HP pools and natural armor that reduces damage before it lands. There is no shield. Every hit on a Grimm chips away at its life directly. This makes fighting Grimm an exercise in attrition — and makes Aura-and-Semblance fights against Aura-bearing antagonists feel mechanically distinct. (See Chapter 12.)

Final Flare in Combat

When a character hits 0 HP, they trigger the Final Flare on their next turn. Full action economy, cannot be downed for that turn, then a Grit check DC 14. See Chapter 6 for the full sequence.

CHAPTER 9

DUST

Dust is solidified nature energy — mined from the earth of Remnant, refined in the kingdoms, and weaponized by Huntsmen across the world. It serves three functions: combat application, environmental manipulation, and crafting or infusion of gear.

Dust Types

Primary Dust — the Four Foundations

Type	Element	Combat Effect	Environmental Use
Fire	Heat / Flame	Burning — 1d6 damage at start of target's next 2 turns	Ignite terrain, melt obstacles, fire barriers
Water	Liquid / Flow	Drenched — Setback on Fire resistance, chains with Lightning	Extinguish fires, slick terrain, push targets
Lightning	Electricity	Shocked — Setback on next attack roll	Power machinery, chain through Drenched, short circuit tech
Wind	Air / Force	Knockback — push target one range band away	Updrafts, redirect projectiles, clear smoke

Derived Tier 1 — Combined Primaries

Type	Components	Combat Effect	Environmental Use
Steam	Fire + Water	Obscured cloud — Setback on all attacks inside for 2 turns	Fill enclosed spaces, obscure areas
Gravity	Fire + Lightning	Grounded or Launched — pin in place OR launch one band up (player's choice)	Crush objects, redirect falling, alter trajectories
Combustion	Fire + Wind	Explosion — Fire damage die to target AND all enemies at Close range, all knocked back one band	Demolish barriers, chain reactions
Ice	Water + Wind	Frozen — target loses Movement next turn, Ice terrain remains	Create barriers, freeze water, slow pursuit
Rock	Lightning + Water	Staggered — target cannot use Bonus Action next turn	Create cover, collapse terrain, block passages

Type	Components	Combat Effect	Environmental Use
Hard-Light	All four primaries	Shield — absorbs one full attack for a target, OR creates environmental barrier	Construct bridges, walls, temporary cover

Derived Tier 2

Type	Components	Combat Effect	Environmental Use
Lava	Fire + Rock	Scorched — immediate Fire damage die AND Lava terrain (entering deals Fire damage die)	Destroy cover, impassable terrain, melt fortifications

Lava is the only Tier 2 Dust. It requires both a primary (Fire) and a derived (Rock). Dust Mages creating Lava in real-time require two turns of setup, unless they are carrying pre-made Rock vials.

Dust as a Resource

Dust is tracked in **Vials**. Each vial contains **3 charges** of a single Dust type.

Rank	Standard Vials	Dust Mage Vials
Initiate	3	5
Huntsman	5	7
Specialist	7	9
Legendary Huntsman	9	11

Dust does not replenish on rests. It is purchased, looted, or crafted between encounters.

Using Dust in Combat

Standard Dust Action (any character). Spend an Action and expend one charge. Either:

- **Infused Attack** — normal attack roll, Dust condition applies on hit in addition to damage.
- **Standalone Effect** — no attack roll for environmental uses (GM sets DC if contested).

Dust Mage infusion. Dust Mages infuse as a Bonus Action instead of a full Action. They also combine two Dust types simultaneously as part of the same activation.

Hard-Light. Creating Hard-Light costs one charge from each of the four primary vials and costs both Bonus Action and Action for that turn.

Combined Dust Effects (Dust Mage Exclusive)

Combination	Result	Effect
Fire + Water	Steam	Obscured cloud, Setback on attacks inside for 2 turns.
Fire + Lightning	Gravity	Target Grounded or Launched (player's choice).

Combination	Result	Effect
Fire + Wind	Combustion	Explosion — Fire damage to target + all Close range enemies, knockback one band.
Water + Wind	Ice	Frozen — target loses Movement, Ice terrain created.
Lightning + Water	Rock	Staggered — target loses Bonus Action next turn.
All four primaries	Hard-Light	Absorb one full attack OR create environmental construct.
Fire + Rock (requires Rock vial)	Lava	Scorched — immediate Fire damage + Lava terrain created.

Improvised Combinations

Only Dust Mages can attempt improvised combinations. The GM sets a **DC 17 Wit + Dust Channeling** check. On Full Success the improvised effect resolves as the player describes (the GM approves a reasonable secondary effect). On Partial Success the effect resolves with an unintended side effect. On Failure the Dust detonates harmlessly or destructively — the GM rules — and the vial is consumed.

Dust Pricing

Tier	Vial Cost (relative units)
Primary	10
Derived Tier 1	25
Hard-Light	60
Derived Tier 2 (Lava)	50

Dust Crafting

Crafting Action	Anyone Trained in Dust Channeling	Dust Mage
Craft Primary vials from raw Dust	Yes	Yes
Craft Tier 1 Derived vials	Yes — DC 14	Yes — Edge on check
Craft Lava (Tier 2)	Yes — DC 17	Yes — Edge on check
Craft Hard-Light	Yes — DC 20	Yes — Edge on check
Improvised / original combinations	No	Yes — DC 17, improvised effect

Crafting Action	Anyone Trained in Dust Channeling	Dust Mage
Real-time combat combination	No	Yes — Bonus Action

Weapon Infusion

Temporary Infusion

Weapon gains elemental property for the next encounter. Cost: 1 charge. DC 11.

Reinforced Infusion

Weapon gains elemental property for the next 3 encounters. Cost: 2 charges. DC 14.

Permanent Infusion

Weapon permanently gains a Dust property. Cost: a full vial (3 charges). DC 17. Once per weapon — a permanently infused weapon cannot be permanently infused again.

Dust Mishandling and Instability

Unrefined Dust

Raw or damaged Dust requires a Wit + Dust Channeling check DC 14 before effect resolves.

Result	Outcome
Full Success	Activates as intended.
Partial Success	Activates with unintended side effect — GM chooses secondary environmental consequence.
Failure	Detonates immediately — character and all Close range allies and enemies take 2d6 damage, Dust consumed with no intended effect.

Critical Hit to Vials

If a character carrying Dust vials takes a critical hit, the GM can rule that one random vial is destabilized. On the character's next turn:

- **Safely discard it** — costs Bonus Action, vial lost but no explosion.
- **Ignore it** — at end of turn, roll 2d10. On a 7 or lower, the vial detonates dealing that Dust type's damage to the character and all Close range combatants.

Environmental Dust Hazards

Raw Dust deposits or damaged containers can be placed in the environment. Any attack within Close range triggers detonation — the radius and effect depend on the Dust type.

Dust Availability by Region

Region	Commonly Available	Rare
Vale / Beacon area	Fire, Wind, Lightning	Gravity, Shadow

Region	Commonly Available	Rare
Atlas / Mantle	Ice, Lightning, Light	Shadow, Earth
Mistral / Haven area	Earth, Wind, Fire	Gravity, Light
Vacuo / Shade area	Fire, Earth, Shadow	Ice, Light

CHAPTER 10

CHARACTER CREATION

This chapter walks you through every step of building a Remnant character from blank page to ready-to-play Initiate. Work through it in order with your GM and your table — many of the steps are collaborative, and the best characters in Remnant are built with the campaign and the team in mind.

Step 1 — Concept

Write down the basics first: **name**, **species** (Human or Faunus — if Faunus, the specific trait you carry), **age**, **hometown or origin**, the academy you attend, and a few sentences of personality and backstory. You don't need everything yet. You need enough that the rest of the steps make sense to you.

Step 2 — Choose Your Academy

Pick one of the four academies. Each grants one fixed Trained skill plus one of choice.

Academy	Kingdom	Trained Skills
Beacon	Vale	Tactics + one of choice
Shade	Vacuo	Survival + one of choice
Haven	Mistral	Composure + one of choice
Atlas	Atlas	Technology + one of choice

Step 3 — Choose Your Weapon-Style Archetype

Pick one archetype from Chapter 7. Brief summaries:

- **Bladesman** — melee, fast, Weapon Art follow-ups.
- **Marksman** — ranged, target-lock with Edge on locked attacks.
- **Brawler** — heavy hitter, soaks pain with Iron Will.
- **Dust Mage** — Dust-primary, Bonus Action infusion, combined Dust.
- **Sentinel** — defender, Intercept for allies, Aura on recovery.
- **Tactician** — commander, Field Orders to buff allies.
- **Semblance Specialist** — soul fighter, Soul Surge tops up power.

Step 4 — Assign Attribute Dice

Distribute the starting array however you choose: one d8, four d6s, one d4.

Guidance, not gospel. Bladesmen and Marksmen lean on Finesse. Brawlers and Sentinels lean on Brawn and Grit. Dust Mages and Semblance Specialists lean on Aura. Tacticians lean on Wit. Place your d8 in your archetype's primary attribute if you want to be effective from session one. Place your d4 somewhere you can live with being weak — it tells you something about who your character is.

Step 5 — Determine Starting Skills

Build your trained skill list from three sources:

- **One Free Pick** — any one skill you were drawn to before academy.
- **Archetype skills** — 2-3 from your chosen archetype (Chapter 7).
- **Academy skills** — 1-2 from your chosen academy.

Record each Trained skill on your sheet along with its governing attribute. Starting characters typically have 4-6 trained skills.

Step 6 — Calculate Aura Pool

Find your Aura die base, add the Initiate rank bonus (+5).

- Aura d4 -> 30 base + 5 = **35**.
- Aura d6 -> 40 base + 5 = **45**.
- Aura d8 -> 50 base + 5 = **55**.
- Aura d10 -> 60 base + 5 = **65**.
- Aura d12 -> 70 base + 5 = **75**.

Step 7 — Calculate HP

Find your Grit die base, add the Initiate rank bonus (+2).

- Grit d4 -> 8 + 2 = **10**.
- Grit d6 -> 12 + 2 = **14**.
- Grit d8 -> 16 + 2 = **18**.
- Grit d10 -> 20 + 2 = **22**.
- Grit d12 -> 24 + 2 = **26**.

Step 8 — Design Your Semblance

Sit down with your GM. Pick Type, Scope, Intensity, Duration, and Limitation. Write a description. Decide if it is Discovered or Undiscovered. Full reference: Chapter 5. Reminder: this is a collaborative design, not a menu pick. Undiscovered Semblances grant +10 to your Aura Pool until the trigger fires.

Step 9 — Choose Starting Dust

An Initiate starts with 3 vials of Dust. Pick the types — subject to GM regional availability guidance (see Chapter 9). Dust Mages start with 5 vials instead of 3.

Step 10 — Build Your Weapon

Name it. Define two transformation forms. For each form, note the type (scythe, rifle, gauntlet, etc.), the range bands it operates in, and the damage die. Use the Weapon Class table from Chapter 8.

Example. *Crescent Rose*. Scythe form (Close, d10) / sniper form (Extreme, d10). One weapon, two completely different tactical uses, Bonus Action to switch.

Step 11 — Define Your Team

Teams in Remnant are named with an acronym built from the first letter of each member's name. Team JNPR (Jaune, Nora, Pyrrha, Ren). Team RWBY (Ruby, Weiss, Blake, Yang). Pick something meaningful. This is collaborative worldbuilding — ideally done at Session Zero with the whole table.

Decide your **team role**: leader, scout, heavy, support, face. Record your three teammates' names.

Step 12 — Record Starting Stats

Before session one, make sure your character sheet shows:

- **Defense Rating** — $8 + \text{Finesse die size} + \text{armor bonus}$.
- **Rank** — Initiate.
- **Training Bonus** — +1.
- **Dust vials** — 3 (or 5 for Dust Mages), types chosen.
- **Aura Pool** — calculated in Step 6.
- **HP** — calculated in Step 7.
- **Trained skills, weapon, weapon forms, Semblance, and team** — all written down.

Everything should be filled in before the first session begins. The table is for playing, not for math.

CHAPTER 11

PROGRESSION AND ADVANCEMENT

Remnant uses **milestone** advancement. There is no experience tracker. The GM decides when the party has reached a moment in the story that warrants the next rank — and at that point, every player ranks up together. Growth in Remnant is collective.

Universal Gains — Every Rank Up

Gain	Details
Training Bonus increases	See Chapter 2 table.
Aura Pool increases	See Chapter 5 rank bonus table.
HP increases	See Chapter 6 rank bonus table.
Attribute Die Upgrade	One attribute of choice upgrades one die size (cap d12).
Dust Vial Capacity increases	See Chapter 9 capacity table.
Semblance Growth	Choose one upgrade from the Semblance upgrade list.

Player Choice Gains — Two per Rank Up

In addition to the universal gains, choose **two** of the following:

Choice	Details
New Trained Skill	Gain Training in one skill not already trained.
Weapon Technique	Unlock a new weapon form or fighting style option.
Archetype Ability	Gain an additional ability tied to your weapon-style archetype.
Dust Proficiency	Gain Training in Dust Channeling OR unlock a new derived Dust recipe.
Signature Upgrade	Enhance your archetype's signature mechanic meaningfully.
Armor Proficiency	Unlock access to heavier armor, increasing Defense Rating bonus.

Attribute Die Upgrade

One attribute upgrades one die size per rank. d4 -> d6 -> d8 -> d10 -> d12. The cap is d12 and may not be exceeded.

Fixed Unlocks at Each Rank Transition

Initiate -> Huntsman

Weapon Mastery I. The character's weapon damage die upgrades one tier permanently. Light -> Standard, Standard -> Heavy, Heavy -> Signature.

Narrative unlock — Huntsman License. The character receives an official Huntsman license. Licensed contracts, legal operation across kingdom borders, recognition by civilian authorities. The world treats you differently now.

Huntsman -> Specialist

Aura Attunement. Once per encounter, when the character's Aura Pool would drop below half from a single hit, they immediately make a free Semblance activation at Minor intensity with no Aura cost. The soul reflexively defends itself.

Narrative unlock — Established Reputation. Civilians recognize the character. Organizations seek their expertise. Antagonists take them seriously.

Specialist -> Legendary Huntsman

Master of the Soul. The character's Semblance evolves beyond its normal limits. They gain one free **Awakening** upgrade to their Semblance — GM approval still required. Additionally, their Aura Pool no longer requires a concentration check when taking damage during a Sustained Semblance.

Narrative unlock — World-level Figure. Kingdoms take notice. Decisions carry genuine political and strategic weight. The world is now shaped, in part, by what this character does.

Small Victories Between Ranks

GMs are encouraged to let players make individual choice-gain selections during significant story beats even without a full rank up — extended time with a mentor, a focused training montage, working closely with a craftsman. Growth should feel continuous, not stepwise.

CHAPTER 12

GM CHAPTER

THE GRIMM

Grimm are creatures of darkness. They have no Aura. They have no purpose other than destruction. They are drawn to negative emotion and they hunt humanity wherever it bleeds. This chapter is the GM's bestiary — every Grimm currently in the game, with full stat blocks and mechanics. Players will benefit from skimming it. GMs will live in it.

Design Principles

- **They hunt what they smell.** Grimm are attracted to fear, anger, grief, and despair. This is a mechanical reality, not just flavor.
- **They have no Aura.** Straight HP pools with natural armor. Fighting them is attrition. There is no shield to break.
- **They escalate.** The longer a fight drags on, the more arrive. Combat in Remnant is meant to be decisive — the world punishes indecision.

Grimm Stat Block Format

Stat	What It Covers
Ferocity	Attack roll bonus — added as a die to 2d10 vs player Defense Rating.
Armor	Flat damage reduction applied before HP loss.
HP	Straight pool, no Aura.
Threat	Overall danger rating for encounter building.

Threat Ratings

Threat	Description	Appropriate Rank
1 — Fodder	Weak, numerous, dangerous in swarms	Initiate
2 — Standard	Competent individual threat	Initiate / Huntsman
3 — Elite	Dangerous solo, terrifying in groups	Huntsman / Specialist
4 — Alpha	Pack leader, mini-boss level	Specialist
5 — Titan	Apex Grimm, encounter-defining	Legendary Huntsman

Threat 1 Grimm

CREEP

THREAT 1

Small, quick, reptilian. The first Grimm most Initiates face.

Ferocity: d4
Armor: 0
HP: 12

Swarm. Always encountered in groups of 4+. For every three Creeps attacking the same target simultaneously, that target has Setback on Defense Rating checks.

Ankle Biter. On hit, target makes Finesse check DC 11 or is Slowed until end of next turn.

Expendable. Creeps don't trigger the Escalation rule. Add freely to any encounter without counting against the Threat budget.

Scatter. When more than half the Creeps in an encounter are destroyed, survivors flee.

BOWOLF

THREAT 1

Bipedal, wolf-like, bone plating. Hunt in packs and test for weakness.

Ferocity: d6
Armor: 1
HP: 20

Pack Tactics. If two or more Beowolves attack the same target in the same round, each gains Edge on their attack roll.

Flinch Test. On the first round of combat Beowolves don't attack. Any character who makes a Resolve check DC 11 forces the pack to commit immediately. Any character who visibly hesitates (or fails a Composure check) grants Beowolves Edge on their first attack.

Threat 2 Grimm

SABYR

THREAT 2

Saber-toothed cat Grimm. Fast, built for ambush and pursuit.

Ferocity: d8
Armor: 2
HP: 38

Ambush Predator. Attacking an unaware target automatically grants Edge and deals maximum damage on hit.

Pounce. Action. Charges from Mid to Close range as part of attack. On hit, target makes Brawn check DC 13 or is knocked prone and Grappled. Sabyr gains Edge on subsequent attacks until Grapple is broken.

Sprint. Bonus Action. Move two range bands instead of one.

Pack Hunt. When two or more Sabys are present, target being attacked by both cannot use their Reaction until start of their next turn.

URSA

THREAT 2

Bear-like, heavily armored, devastating up close.

Ferocity: d8

Armor: 3

HP: 40

Crushing Blow. On a critical hit, target is knocked back one range band and must make Grit check DC 14 or be knocked prone.

Thick Hide. Ranged attacks deal half damage unless attacker is Trained in Perception and makes a called shot targeting a weak point.

NEVERMORE

THREAT 2

Massive crow-like Grimm. Aerial predator.

Ferocity: d8

Armor: 2

HP: 35

Airborne. Operates at Long or Extreme range by default. Melee attacks cannot reach it without Semblance, grappling mechanics, or environmental factors.

Feather Barrage. Action. Volley of razor feathers hits all characters at Mid range — each makes Finesse check DC 14 or takes damage.

Screech. Once per encounter. All characters make Resolve check DC 11 or gain Setback on all rolls until end of next turn.

Threat 3 Grimm

ALPHA BEOWOLF

THREAT 3

Larger, older, bone plating covering most of its body. Leads the pack.

Ferocity: d10

Armor: 3

HP: 55

Howl. Bonus Action. All Beowolves within Long range gain Edge on attack rolls until start of the Alpha's next turn.

Pack Tactics & Flinch Test. Also has all mechanics of the standard Beowolf.

KING TAIJITU

THREAT 3

Two-headed serpent Grimm. Each head fights differently.

Ferocity: d10 (White) / d8 (Black)

Armor: 2

HP: 60

Two Heads, Two Actions. Gets two Actions per turn, one per head. Cannot both target the same character in the same turn.

White Head — Aggressor (Ferocity d10). Direct, powerful, relentless. **Constrict:** on hit, target makes Brawn check DC 14 or is Grappled.

Black Head — Cunning (Ferocity d8). Slower, calculating, looks for openings. **Venom Strike:** on hit, target makes Grit check DC 11 or is Poisoned — Setback on all Brawn and Finesse checks for 3 rounds.

APATHY

THREAT 3

Doesn't attack directly. It drifts. It moans. And the sound drains the will to keep fighting.

Ferocity: d6
Armor: 1
HP: 30

Drain. At the start of every round while at least one Apathy is present, every character makes a Resolve check DC 13: Full Success — no effect; Partial Success — lose Bonus Action this round; Failure — lose Bonus Action AND Movement this round.

Cumulative Despair. Each consecutive round a character fails their Drain check, the DC increases by 1. Three consecutive failures: character becomes Despairing. An ally must spend their full Action to physically shake them and succeed on a Resolve check DC 14 to snap them out.

Ghostly Movement. Cannot be heard approaching. Only sight or Aura Sense can detect them before Drain begins.

Fragile. HP 30, Armor 1. A focused character can destroy one quickly — the challenge is maintaining action economy while Drain is active.

Pack Moan. Each additional Apathy increases Drain DC by 2. (1 = DC 13, 2 = DC 15, 3 = DC 17, etc.)

GOLIATH

THREAT 3

Ancient elephant-like Grimm. Layers of accumulated bone plating from centuries of existence.

Ferocity: d8
Armor: 6
HP: 75

Ancient Armor. Standard attacks deal minimum damage. Weak points are the gaps between armor plates — around joints and the face. Called shots targeting these deal full damage. Identifying weak points requires Wit check DC 13 or Training in Perception.

Tremor Step. Passive. Whenever it moves range bands, every character at Close range makes Finesse check DC 12 or is knocked prone from the shockwave.

Tusk Gore. Action. On hit, target makes Grit check DC 16 or is launched two range bands away, landing prone and taking additional d8 impact damage.

Stomp. Action. All characters at Close range make Finesse check DC 14 or take full damage and are knocked prone. Success still takes half damage.

Memory of Failure. If a Huntsman has encountered this specific Goliath before and failed to defeat it, the Goliath recognizes and prioritizes that character above all others. GMs should track which parties have encountered which Goliaths and carry that history forward.

Immovable. Cannot be moved by any forced movement effect. Only Gravity Dust can momentarily pin it for one round.

Threat 4 Grimm

URSA MAJOR

THREAT 4

Massive, ancient, bone plating covering almost its entire body.

Ferocity: d12

Armor: 6

HP: 90

Earthshaker. Action. The Ursa slams the ground — all characters at Close range make Finesse check DC 14 or are knocked prone.

Crushing Blow & Thick Hide. Also has all mechanics of the standard Ursa.

ROYAL NEVERMORE

THREAT 4

Ancient, massive, feathers like blades. Bone mask covers its entire skull.

Ferocity: d12

Armor: 4

HP: 80

Divebomb. If the Royal Nevermore moves from Extreme to Close range in one turn, it deals automatic damage to every character at Close range on arrival — no attack roll required.

Airborne, Feather Barrage, Screech. Also has all mechanics of the standard Nevermore.

DEATHSTALKER

THREAT 4

Scorpion Grimm the size of a house. Nearly impenetrable natural armor.

Ferocity: d10

Armor: 8

HP: 100

Impenetrable Shell. Standard attacks always deal minimum damage. Only called shots targeting weak points (underbelly, eyes, stinger joint) deal full damage.

Stinger. Action. Ranged attack, Mid range. On hit, target makes Grit check DC 17 or is Poisoned — 1d8 damage at start of each of their turns for 3 rounds.

Claw Sweep. Action. Melee attack targeting all characters at Close range simultaneously.

Death Throes. When reaching 0 HP, gets one final Action — a frenzied Claw Sweep at Edge — before dissolving.

BERINGEL

THREAT 4

Gorilla-like Grimm. Intelligent, adaptive, watches how you fight and adjusts.

Ferocity: d10

Armor: 4

HP: 85

Adaptive Fighter. After the first round of combat, identifies the character who dealt the most damage and gains Edge on all attacks against that character for the rest of the encounter.

Knuckle Rush. Action. Charges from Mid to Close range as part of attack — no Movement cost. On hit, target makes Brawn check DC 14 or is knocked back one range band and knocked prone.

Chest Pound. Bonus Action. Once per encounter. All characters at Close and Mid range make Resolve check DC 14 or have Setback on their next attack roll.

Hurl Debris. Action. Ranged attack, Long range. Tears a chunk of the environment and hurls it. On hit, target makes Finesse check DC 14 or is Staggered. Cannot be used if terrain provides nothing to throw.

Pack Loyalty. If Beowolves are present, the Beringel coordinates them. All Beowolves in the same encounter always have Pack Tactics active regardless of how many are attacking the same target.

Threat 5 Grimm

GRIMM DRAGON

THREAT 5

Titan class. Ancient beyond reckoning. A regional catastrophe.

Ferocity: d12
Armor: 10
HP: 200

Titan Presence. At combat start every character makes Resolve check DC 17. Failure: Setback on all rolls for first two rounds.

Flight. Operates at Extreme range by default. Can choose to land, shifting to Close/Mid.

Grimm Breath. Action. Recharge on 5+ on a d10 at start of its turn. Targets all characters in a chosen range band — massive damage, Burning condition applied.

Spawn Point. While the Dragon is alive, lesser Grimm arrive at the start of each round. Roll a d6 — that many Threat 1 Grimm enter from the nearest edge.

Ancient Shell. Armor of 10 cannot be bypassed by called shots alone. Reducing it requires specific environmental factors, coordinated team efforts, or exceptional Semblance use. Frame this as a puzzle as much as a fight.

NUCKELAVEE

THREAT 5

A horseback Grimm of horrifying proportions. A skeletal rider fused to a skeletal horse, exposed muscle and sinew, no skin. It does not stop.

Ferocity: d12
Armor: 8
HP: 180

Relentless Pursuit. Cannot be outrun by normal Movement. Any character who attempts to increase their range band finds the Nuckelavee closes that distance at the end of the same round at no action cost. Escaping requires Semblance use, environmental obstacles, or a specific tactical solution.

Mane Whip. Action. Hits all characters at Close AND Mid range simultaneously. Each makes Finesse check DC 17 or takes full damage and is knocked prone.

Mounted Charge. Action. Targets one character — cannot be Intercepted by a Sentinel. On hit: double damage die and thrown two range bands away landing prone. On critical hit: target immediately triggers their Final Flare if HP remaining.

Tenacity. The Frozen, Shocked, Staggered, and Knockback conditions have no effect. Only Gravity Dust and Burning affect it normally — and even then it does not stop moving.

Death Scream. When reaching 0 HP, releases one final Reaper's Cry at full effect — every character makes the same Resolve check DC 20.

The Reaper's Cry

At the start of combat, *before any initiative rolls*, every character makes Resolve check DC 20:

- **Full Success** — no effect.
- **Partial Success** — Setback on all Resolve checks for the remainder of the encounter.
- **Failure — Terrified.** Must move away from the Nuckelavee on first turn, Setback on all rolls for 2 rounds.

The Reaper's Cry is the announcement that the Nuckelavee has chosen this hunt. It is not subtle. It is not survivable by ignoring. The GM is asked to describe it with the weight it deserves.

Complete Grimm Bestiary Summary

Grimm	Threat	Ferocity	Armor	HP
Creep	1	d4	0	12
Beowolf	1	d6	1	20
Sabyr	2	d8	2	38
Ursa	2	d8	3	40
Nevermore	2	d8	2	35
Alpha Beowolf	3	d10	3	55
King Taijitu	3	d10/d8	2	60
Apathy	3	d6	1	30
Goliath	3	d8	6	75
Ursa Major	4	d12	6	90
Royal Nevermore	4	d12	4	80
Deathstalker	4	d10	8	100
Beringel	4	d10	4	85
Grimm Dragon	5	d12	10	200
Nuckelavee	5	d12	8	180

CHAPTER 13

GM CHAPTER

GAME MASTER GUIDANCE

This chapter is for the Game Master. It contains tone guidance, Session Zero structure, combat pacing advice, social systems, encounter building, world tone, and milestone advancement timing — everything not strictly a rule, but everything that makes Remnant feel like Remnant at the table.

The GM's Role in Remnant

Four Principles

You are the world, not the enemy. Grimm are not your pieces to defeat players with. They are the ambient danger of a broken world. Make Remnant feel alive and threatening — not to win.

Aura Break is a story moment, not a mechanical threshold. Describe it every single time. The flickering light dying out. The sudden vulnerability in their eyes. Their teammates noticing. Make it matter narratively.

Emotion is mechanics. Take the emotional lives of player characters seriously. Ask about them. Reflect them through the Grimm that appear, the encounters that find the party, the world's response to their state of mind.

The Final Flare is sacred. When a character hits their Final Flare, pause. Give that player the spotlight completely. Let everyone at the table feel the weight of what is happening. This is their moment — protect it.

Session Zero

Session Zero is **mandatory** for Remnant.

Tone and Content

Establish **Lines and Veils**. Lines are content that won't appear at all. Veils are content that happens offscreen. Document the table's decisions and refer back to them whenever the campaign drifts near either.

Academy and Team Formation

Decide which academy the characters attend. Decide whether they are a team. If they are a team, choose a team name — built as an acronym from the first letter of each member's name. Encourage meaningful acronyms; this is collaborative worldbuilding.

Semblance Creation

Work through each character's Semblance privately with each player. If a player chooses Undiscovered, establish the trigger condition between only the two of you. Other players should not know.

Character Connections

Ask each player:

- *Who at this table does your character trust most, and why?*
- *Who does your character have unresolved tension with, and what caused it?*

Establish the Stakes

What is this campaign about at its core? Give the players a north star from session one. Not the plot — the *question* the campaign is asking.

Running Combat

Start Fast

Don't let setup drag. Roll initiative, establish range bands narratively, get to the first action quickly. The kinetic energy of a RWBY fight should be present from the first roll.

Describe Grimm as Threats, Not Stat Blocks

Never say "the Ursa has 22 HP remaining." Say "the Ursa is bleeding black smoke from the gash across its shoulder but it's still coming."

HP Remaining	Description
75-100%	Fresh, aggressive, unfazed.
50-74%	Marked but dangerous, more focused.
25-49%	Visibly wounded, smoke pouring from injuries, desperate.
1-24%	Barely holding together, erratic, unpredictable.
Final Flare triggered	One last surge of terrible violence before dissolving.

Make Range Bands Visual

At the start of each encounter, describe the environment in terms that naturally establish range bands. *"You're in a clearing — the tree line is about Long range out, the collapsed wall gives Close range cover, and the road runs Mid range along the eastern edge."* Players track their own positions in those terms.

Reward Creative Dust Use

When a player attempts something inventive that isn't explicitly in the rules, default to *yes with a DC* rather than no. A player trying to freeze a river to cut off Grimm pursuit gets a Wit + Dust Channeling check, not a rules citation.

Track Emotional Weight Visibly

Keep a simple note for yourself. When something happens that generates Emotional Weight (see below), mark it down. Let it inform what finds the party next.

Running Investigations and Social Encounters

Skill Challenges

For complex non-combat situations:

- Establish a goal and a number of Successes needed (usually 3-5).
- Players take turns describing their approach and rolling relevant skills.
- Track successes and failures — three failures before the success threshold means the situation goes wrong in an interesting way, not a dead end.
- Different players should be able to contribute different skills — no single correct approach.

Social Disposition Rating

NPCs in social situations have a **Disposition Rating** instead of a Defense Rating.

NPC Disposition	Rating
Friendly	8
Neutral	12
Suspicious	16
Hostile	20
Fanatical	24

Reaching or beating the NPC's Disposition Rating moves them one step toward Friendly. Failing by 4 or more moves them one step toward Hostile. Context and roleplay always modify these numbers — a well-roleplayed conversation can shortcut several steps.

The Grimm as a Living Threat

Never Let Grimm Feel Routine. Even Threat 1 Creeps should feel dangerous when the fiction calls for it. A lone Beowolf in an open field is manageable. The same Beowolf stalking a party through a collapsing building at night is terrifying. The Grimm don't change — the context does.

Grimm Don't Wait. They attack when they smell weakness. If the party is arguing loudly, grieving, or exhausted after a long fight — Grimm arrive. Not as punishment but as a natural consequence of how the world works.

Alpha Grimm Are Events. When a Threat 4 or 5 Grimm appears it should be foreshadowed — tracks too large, smaller Grimm fleeing, villagers describing something unknown. The Nuckelavee shouldn't walk out of a fog bank with no warning.

Let Grimm Win Sometimes. Not every encounter needs to be survivable through clever play. Sometimes the right answer is retreat. Reward smart withdrawal as much as heroic victory.

Encounter Building

Threat Budget by Party Rank

Party Rank	Encounter Budget (Threat Points)
Initiate	4-6
Huntsman	8-12

Party Rank	Encounter Budget (Threat Points)
Specialist	14-18
Legendary Huntsman	20-28

Spend Threat points on Grimm at or below the party rank's appropriate Threat tier. A six-point encounter for an Initiate party could be three Beowolves (3) plus four Creeps (Creeps are Expendable and don't count) plus one Ursa (2) plus one extra Beowolf (1). Spend the budget so the encounter has shape, not just numbers.

The Escalation Rule

If the party spends more than 5 rounds on an encounter, add Threat 1 Grimm equal to the round number minus 4 each round. Round 6 adds 2. Round 7 adds 3. The fight has gone on long enough that the world has noticed.

Emotional Weight

The GM tracks the party's emotional state between encounters. After major loss, character death, moral failure, or sustained high tension — the party carries **Emotional Weight**.

Effects of Emotional Weight:

- Random encounters are more frequent.
- Threat rating of encountered Grimm increases by 1.

Clearing Emotional Weight. Long Rest in a safe location, a meaningful character moment of resolution, or a significant story victory.

In Combat. A character triggering their Final Flare is a beacon — the GM can rule 1-2 Threat 1 Grimm arrive drawn by that spike of fear and pain.

World Tone and Authenticity

RWBY is Optimistic Tragedy.

Characters believe in people, in each other, in the possibility of a better world — but the game earns that hope by putting it through genuine darkness. Let players' characters believe in something and then make that belief matter by threatening it.

The Four Kingdoms Are Distinct.

Kingdom	Feel	GM Texture
Vale	Warm, lived-in, community-focused	Ordinary people with extraordinary courage, tight neighborhoods, local pride
Atlas	Cold, hierarchical, technologically advanced	Class tension, military precision, beauty built on inequality
Mistral	Ancient, layered, morally complex	Old money and deep poverty side by side, tradition masking corruption
Vacuo	Harsh, free, brutally honest	Survival of the worthy, genuine solidarity among survivors, no pretense

Faunus Discrimination Is Real.

Don't sanitize this — but handle it with care. Establish at Session Zero how present this element will be in your campaign. Some tables want it as a central tension. Some want it as background detail. Both are valid. What is not valid is treating it like it doesn't exist.

Salem Is Always There.

Even if players never encounter Salem directly, her influence should be felt. The Grimm that seem more organized than normal. The council member whose decisions don't quite make sense. The disaster with strange timing. The world has a hidden architecture. The GM is the one who knows.

Milestone Advancement Timing

Initiate -> Huntsman

Party has faced genuine danger and survived through skill. Demonstrated team function under pressure. Completed at least one mission with real stakes. Roughly 4-6 sessions in.

Huntsman -> Specialist

Party has operated independently, made difficult choices without academy guidance, handled threats requiring more than combat skill. Established reputation. Personal stakes have been carried. Roughly 8-12 additional sessions in.

Specialist -> Legendary Huntsman

Culmination of a major story arc. A specific moment of transformation — not accumulated experience but identity tested and forged. Should feel rare. Not every campaign needs to reach it.

Between Ranks — Small Victories

Let players make choice-gain selections during significant story beats even without a full rank up — extended time with a mentor, a focused training montage, working closely with a craftsman. Growth should feel continuous, not stepwise.

CHAPTER A

CONDITIONS REFERENCE

Every condition in the game, alphabetically, for fast lookup at the table.

Condition	Effect
Aura Broken	Shield gone, Semblance locked, HP exposed, visible to enemies.
Burning	Take damage die at start of next 2 turns (Fire Dust effect).
Despairing	Cannot take aggressive actions, can only move toward nearest exit.
Disarmed	Weapon dropped, costs Action to recover.
Disoriented	Setback on all rolls until end of next turn.
Drenched	Setback on Fire resistance; Lightning chains through Drenched targets.
Frozen	Lose Movement next turn.
Grappled	Lose Movement until Brawn check DC 14 to break free.
Poisoned	Setback on Brawn and Finesse checks for 3 rounds.
Prone	Lose Movement next turn to stand; melee attackers gain Edge against prone targets.
Shocked	Setback on next attack roll.
Slowed	Cannot move range bands until end of next turn.
Staggered	Cannot use Bonus Action next turn.
Terrified	Must move away from source on first turn, Setback on all rolls for 2 rounds.
Weapon Jam	Weapon locked in current form for next turn, cannot transform.

CHAPTER B

DUST QUICK REFERENCE

All 11 Dust types in a single compact lookup table.

Type	Tier	Components	Combat Effect	Environmental
Fire	Primary	—	Burning (1d6 dmg, 2 turns)	Ignite, melt, fire barriers
Water	Primary	—	Drenched (Setback vs Fire, chains Lightning)	Extinguish, slick, push
Lightning	Primary	—	Shocked (Setback next attack)	Power, chain, short-circuit
Wind	Primary	—	Knockback one band	Updrafts, redirect, clear
Steam	Tier 1	Fire + Water	Obscured cloud, Setback in cloud	Fill / obscure
Gravity	Tier 1	Fire + Lightning	Grounded or Launched	Crush, redirect
Combustion	Tier 1	Fire + Wind	Explosion + knockback band	Demolish, chain
Ice	Tier 1	Water + Wind	Frozen, Ice terrain	Barriers, slow
Rock	Tier 1	Lightning + Water	Staggered (no Bonus Action)	Cover, collapse
Hard-Light	Tier 1	All four primaries	Absorb one attack OR construct	Bridges, walls
Lava	Tier 2	Fire + Rock	Scorched + Lava terrain	Destroy, impassable, melt

CHAPTER C

SEMBLANCE REFERENCE

Aura Cost Table — Intensity by Scope

Intensity	Personal	Single Target	Area
Minor	4	6	8
Moderate	8	12	16
Major	12	18	24
Extreme	16	24	32

Semblance Types

Type	Description	Primary Attribute
Enhancement	Amplifies the user's own physical capabilities	Brawn or Finesse
Projection	Creates or launches an external force or construct	Aura
Manipulation	Alters the environment or another person	Resolve or Aura
Restoration	Heals, stabilizes, or strengthens allies	Aura
Perception	Expands senses or awareness beyond normal limits	Wit
Binding	Restrains, immobilizes, or controls movement	Aura or Resolve

Semblance Growth Upgrades

Upgrade	Effect
Efficiency	Reduce Aura cost by 2 (minimum 2).
Reach	Increase Scope by one tier.
Power	Increase Intensity by one tier.
Precision	Gain Edge on contested Semblance activation rolls.
Endurance	Sustained duration costs reduce by 1 Aura per round.
Resilience	Concentration check DC reduces to 8.

Upgrade	Effect
Awakening	Player designs a custom upgrade — requires GM approval.

CHAPTER D

GRIMM QUICK REFERENCE

Bestiary Summary

Grimm	Threat	Ferocity	Armor	HP
Creep	1	d4	0	12
Beowolf	1	d6	1	20
Sabyr	2	d8	2	38
Ursa	2	d8	3	40
Nevermore	2	d8	2	35
Alpha Beowolf	3	d10	3	55
King Taijitu	3	d10/d8	2	60
Apathy	3	d6	1	30
Goliath	3	d8	6	75
Ursa Major	4	d12	6	90
Royal Nevermore	4	d12	4	80
Deathstalker	4	d10	8	100
Beringel	4	d10	4	85
Grimm Dragon	5	d12	10	200
Nuckelavee	5	d12	8	180

Threat Budgets

Party Rank	Encounter Budget
Initiate	4-6
Huntsman	8-12
Specialist	14-18
Legendary Huntsman	20-28

CHAPTER E

GLOSSARY

Every key term in Remnant, defined briefly for fast lookup.

Term	Definition
Aura	The manifestation of a person's soul as protective energy. Forms a shield and serves as the resource pool for Semblance activation.
Aura Break	The moment the Aura Pool reaches 0. The shield drops, Semblance locks, HP is exposed, and the Aura Broken condition applies.
Aura Broken	A condition. No shield, no Semblance, HP exposed, visible to enemies. Some Grimm specifically hunt Aura Broken targets.
Aura Pool	A character's total Aura points. Base from Aura die + Rank Bonus.
Called Shot	An attack declared at a specific location before the roll. Setback applies; on hit, a location-specific effect resolves.
Condition	A discrete status effect with specific mechanical consequences. See Appendix A.
Critical Hit	An attack roll that exceeds the target's Defense Rating by 8 or more. Roll damage die twice, take higher, add Brawn or Finesse die.
Critically Downed	A dying character. Three failed Grit checks DC 11 before three successes equals death. Requires Action + Bonus Action to stabilize.
Defense Rating	A character's static target number for incoming attacks. 8 + Finesse die size number + armor bonus.
Degrees of Success	Full Success (meet DC), Partial Success (within 3 below DC), Failure (4+ below DC).
Downed	An unconscious but stable character. An ally's Action wakes them at 1 HP. They carry Setback for the rest of the encounter.
Dust	Solidified nature energy. Four primaries, six Tier 1 derivatives, one Tier 2 (Lava).
Edge	Roll attribute die twice, take the higher result.
Emotional Weight	GM-tracked state of the party after major loss or sustained tension. Increases encounter frequency and Threat by 1. Cleared by safe Long Rest, character resolution, or significant victory.

Term	Definition
Ferocity	A Grimm's attack roll bonus, expressed as a die size.
Final Flare	When a character hits 0 HP, on their next turn they rise with full action economy and cannot be downed. At the end of that turn, Grit check DC 14 determines the outcome.
Grimm	Creatures of darkness. No Aura. Straight HP and natural armor. Drawn to negative emotion.
Initiate	The starting rank for a Huntsman in training. Training Bonus +1.
Legendary Huntsman	The highest rank. Training Bonus +4. Master of the Soul, Awakening Semblance upgrade.
Long Rest	Full Aura recovery, half max HP recovery, clears Emotional Weight in a safe location.
Partial Success	Within 3 below DC. The action succeeds with a cost or complication.
Rank	A character's progression tier. Initiate, Huntsman, Specialist, Legendary Huntsman.
Reaction	Off-turn action. Intercept (Sentinel), counters, certain Semblance abilities.
Semblance	A unique personal ability that manifests a character's identity through their Aura. Built from Type, Scope, and Intensity.
Semblance Specialist	Archetype that weaponizes the soul. Signature mechanic: Soul Surge.
Sentinel	Archetype that protects allies. Signature mechanic: Guardian's Stand (Intercept).
Setback	Roll attribute die twice, take the lower result.
Short Rest	Rolls Grit die for HP recovery; recovers a fraction of max Aura based on rank.
Specialist	The third rank. Training Bonus +3. Aura Attunement unlocks.
Threat	Grimm danger rating from 1 (Fodder) to 5 (Titan). Used for encounter budgets.
Training Bonus	Bonus added to checks in a Trained skill. +1 / +2 / +3 / +4 by rank.
Undiscovered Semblance	A Semblance not yet manifested. Grants +10 Aura Pool until discovered. First activation is free.
Weapon Transformation	All Huntsman weapons have a minimum of two forms, switched as a Bonus Action.

LEGAL - CREDITS

Remnant: A RWBY Tabletop Roleplaying Game is an unofficial fan creation. RWBY(TM) and all related characters, names, kingdoms, academies, locations, and elements are the property of Rooster Teeth Productions. This work is not affiliated with, endorsed by, or connected to Rooster Teeth Productions in any way. Created for personal, non-commercial use only.

Designed with deep love for the world of RWBY. Built at home, on free evenings, with no commercial intent. If you got it, you got it for free, and you should keep it that way.
